| Description Hi, I use Redmine with a subversion repository. When I try to view differences with a file with accents, I have this message : The entry or revision was not found in the repository. Example : My file's name is Reédmine.tex. It's impossible to view differences. Thanks. Fabien. | | | |

History

#1 - 2009-03-10 12:04 - Sonar Nautilus

Check in the Apache error_log. I had the error "sh: svn: command not found".
You might like this. The file /lib/redmine/scm/adapters/subversion_adapter correct line SVN_BIN , example SVN_BIN = "/usr/local/bin/svn --config-dir /home/www/svnconfig"

#2 - 2009-03-10 13:50 - Fabien Carpentier

Thanks, but it doesn't work.

I use mongrel, and in the log file I have this message :
"svn: Safe data 'Index: Re' was followed by non-ASCII byte 195: unable to convert to/from UTF-8"

(for my file Reédmine.tex)

#3 - 2009-03-10 16:35 - Sonar Nautilus

look <http://www.redmine.org/issues/show/2006>

#4 - 2009-03-10 21:19 - Jean-Philippe Lang

- Status changed from New to Closed

A quick google search shows that this error message is not related to Redmine but Subversion. So I'm closing this.
<http://www.google.fr/search?hl=fr&q=svn%3A+Safe+data+was+followed+by+non-ASCII+&btnG=Recherche+Google&meta=&aq=f&oq=>

And please, next time read the [submission guidelines](#).
