Description

Hi All,
we started using Redmine in our company and one of problems we have is that we are using MFiles for document sharing - it could be shared as hyperlinks in emails like:

```
m-files://show/1481067C-D3D8-465B-BE1D-1FC924913B39/0-147851?object=A6DD4B88-47CF-44A8-91AD-35411808231A
```

Unfortunately Textile or Markdown doesnt seem to dash friendly :)

"Using
Textile":m-files://show/1481067C-D3D8-465B-BE1D-1FC924913B39/0-147851?object=A6DD4B88-47CF-44A8-91AD-35411808231A
[Using Textile without dash](#)

The problem seems to be dash. How this could be solved? Thank you !

History

#1 - 2018-09-12 14:00 - M F

- File `wiki_formatting.rb` added

Edited: `redmine/lib/redmine/wiki_formatting.rb` and when you paste just

```
m-files://show/1481067C-D3D8-465B-BE1D-1FC924913B39/0-147851?object=A6DD4B88-47CF-44A8-91AD-35411808231A
```

it makes hyperlink

Change:

```
module LinksHelper
  AUTO_LINK_RE = %r{
    (
      <\w+[\^>]*?>|          # leading text
      [\s\(\[\,;]|          # leading HTML tag, or
      ^                      # leading punctuation, or
                          # beginning of line
    )
    (
      (?:(https?://)|        # protocol spec, or
      (?:(s?ftp)?://)|
      (?:(m-files)?://)|    # m-files
      (?:(www\.)|           # www.*
    )
    (
      ([^<]\S*)            # url
      (\/?)?               # slash
    )
    ((?>|&gt;)?|^[[:alnum:]_\/;\(\)]*) # post
    (?=<|\s|$)
  }x unless const_defined?(:AUTO_LINK_RE)
```

And how to support "Title":url syntax?
btw: do I need to "bundle install" each time I edit source code?
