Thanks for taking care of it

**Related issues:**

Is duplicate of Redmine - Feature #3952: Filtering by subproject still shows ... **New** **2009-10-01**

**History**

**#1 - 2018-09-12 16:27 - Holger Just**

- Category changed from Search engine to Issues filter
- Status changed from New to Needs feedback

With the filter you have shown there, you should get all issues which belong either to your it project (i.e. the project you are currently in) or your "Website relaunch" project. If you are in a project, Redmine will always show the issue sin that project in addition to the issues from the selected sub-projects. To only show the issues in the sub-project please navigate to the project directly.

Does this already solve your issue?

If that is the desired behaviour, then yes, this does resolve my issue. Sorry. I thought it would work differently. My mistake.

Thanks for the feedback.
