Redmine - Feature #29712
Preview and wiki toolbar for full width custom fields

2018-10-02 09:12 - Go MAEDA

Target version:	4.1.0			
Resolution:	Fixed			

Description

Currently, full-width custom fields don't have preview feature and wiki toolbar.

Since those look like a description field, I think it would be great and makes UI consistent to have preview and toolbar.

By applying this patch preview and toolbar will be added to the full width IssueCustomField.

Full width custom fields often write long sentences, and previews and toolbars can help with that input.

Previous patch included unnecessary code, so I fixed it.
Please delete the previous patch.

Thanks Mizuki for working on this. One question after I took a look at the patch without actually testing it, why we limit this feature only to Issue custom fields? I think we should have the toolbar wherever the text formatting is supported.

Thank you for your feedback. I had overlooked it.
I will fix the patch.

- File feature-29712-v3.patch added

I wrote a patch to add a Wiki toolbar in other custom fields.

UserCustomField, TimeEntryActivityCustomField, and IssueCustomField(full_width_layout? == false) do not fit in the Wiki toolbar because the width of the input field is not the full width.
Therefore, this patch does not display the Wiki toolbar for these custom fields.

#9 - 2018-10-28 21:46 - Marius BALTEANU

Thanks again for working on this. Today I had some time to look over the proposed patch and I am almost sure that we should not touch the

FieldFormat module to implement this feature.

I propose the following directions to implement this:

1. Call wikitoolbar_for from issues/_form_custom_fields.html.erb

    --- a/app/helpers/custom_fields_helper.rb

    +++ b/app/helpers/custom_fields_helper.rb

    @@ -79,11 +79,18 @@ module CustomFieldsHelper

      # Return custom field html tag corresponding to its format

      def custom_field_tag(prefix, custom_value)

    --- a/app/views/issues/_form_custom_fields.html.erb

    +++ b/app/views/issues/_form_custom_fields.html.erb

    @@ -20,4 +20,5 @@

    <% custom_field_values_full_width.each do |value| %>

      <p><%= custom_field_tag_with_label :issue, value, :required => @issue.required_attribute?(value.custom_field_id) %></p>

    + <%= wikitoolbar_for "issue_custom_field_values_#{value.custom_field_id}", preview_issue_path(:project_id => @issue.project, :issue_id => @issue.id) %>

    <% end %>

2. Add 'wiki-edit' class to field from custom_fields_helper.rb

    --- a/app/helpers/custom_fields_helper.rb

    +++ b/app/helpers/custom_fields_helper.rb

    @@ -79,11 +79,18 @@ module CustomFieldsHelper

      # Return custom field html tag corresponding to its format

      def custom_field_tag(prefix, custom_value)

    + css = "#{custom_value.custom_field.field_format}_cf"

    + cf_format_store = custom_value.custom_field.format_store

    + if cf_format_store.key?('text_formatting') && cf_format_store['text_formatting'] == 'full' &&

    +   cf_format_store.key?('full_width_layout') && cf_format_store['full_width_layout'] == '1'

    +   css << ' wiki-edit'

    + end

    +

      custom_value.custom_field.format.edit_tag self,

        custom_field_tag_id(prefix, custom_value.custom_field),

        custom_field_tag_name(prefix, custom_value.custom_field),

        custom_value,

    -    :class => "#{custom_value.custom_field.field_format}_cf"

    +   :class => css

      end

Initially, I wanted to add the 'wiki-edit' class also from the view (together with the required attribute, but the custom_field_label_tag do not pass the options variable to custom_field_tag. Maybe it is better to modify these 2 functions instead of the solution from the above diff because will keep the code clearer (those 4 conditions do not look to well).

@Mizuki, what do you think?

I'm blind, sorry. We should use the existing method full_width_layout? instead of the 4 conditions.

In the end, it could look something like this:

    css << ' wiki-edit' if custom_value.custom_field.full_width_layout?

#13 - 2018-10-31 01:35 - Mizuki ISHIKAWA

#29712#note-9 code looks better than changing the FieldFormat module.

Custom fields other than IssueCustomFields do not have full_width_layout.
(http://www.redmine.org/projects/redmine/repository/entry/trunk/app/views/custom_fields/formats/_text.html.erb#L4)
If possible, I think that it is better to display the toolbar in other custom fields as well.

#14 - 2018-11-05 03:01 - Go MAEDA
- Target version set to Candidate for next major release

#15 - 2019-02-03 21:38 - Marius BALTEANU
- File 0001-Show-Edit-Preview-tabs-for-full-width-layout-custom-.patch added

Implemented for full width layout custom fields.

#16 - 2019-02-05 20:17 - Marius BALTEANU
- File 0002-Refactor-custom-field-value-tag-for-custom-fields-wi.patch added

Applying my previous patch, will allow us to refactor a small piece of code that adds the 'wiki' class to the issues custom fields with text formatting enabled (including my fix for #30027). I'm attaching the patch.

Agree, we should show to toolbar for all custom fields that support full text formatting, but I prefer to do it in another ticket because it require more changes.
