#### Description

Hi. We are using Redmine in our company and relying on its incoming email processing features.

In a case when created from inbound email (via rdm-mailhandler.rb), the new user account will be configured with "only\_my\_events" email notification setting which is hard-coded in MailHandler.new\_user\_from\_attributes method as can be seen here [https://github.com/redmine/redmine/blob/master/app/models/mail\\_handler.rb#L525](https://github.com/redmine/redmine/blob/master/app/models/mail_handler.rb#L525)

I am not sure if this is by design, should the default notification option be used instead, so such user account presets are consistent with accounts created via Redmine UI?

preconditions:

- running Redmine server with email Webservice enabled
- a valid parseable email message;
- the user with the address in email FROM field should not exist
- a project with the name referenced in rdm-handler call should exist
- the default\_notification\_option setting should have any value except "only my events"

test case:

invoke rdm-handler.rb from the command line

```
./rdm-mailhandler.rb -u http://$HOST:$PORT -k $EMAIL_WS_API_KEY --unknown-user create --project $PROJECT_NAME < ./msg.txt
```

expected result:

the newly created user should have its mail\_notification property equal to Setting.default\_notification\_option

observed result:

```
2.2.5 :007 > User.last.mail_notification
User Load (1.2ms) SELECT "users".* FROM "users" WHERE "users"."type" IN ('User', 'AnonymousUser') ORDER BY "users"."id" DESC LIMIT 1
=> "only_my_events"
2.2.5 :008 > Setting.default_notification_option
=> "all"
```

Thanks,  
Eugene Dubinin

I think we should change the current behaviour and use the default notification option.
