

Redmine - Patch #29885

Fix 403 error while adding new watchers when selected issues in context\_menu from different projects

2018-10-31 10:49 - Andrey Lobanov (RedSoft)

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:	Candidate for next minor release		
Description			
Tested issue on trunk; Steps to reproduce: 1) Select 2 or more issues from different projects 2) Open context menu 3) Select Watchers->New 4) Type some user name 5) In dev tools you will see 403 error;

Could you add a test to the patch?

#3 - 2018-11-21 10:33 - Go MAEDA

Confirmed the problem.

#4 - 2018-11-25 21:58 - Marius BĂLTEANU

I'm not able to reproduce the problem in order to review the patch.

I tried from the global issues page and each request made from contextual menu to add watchers to issues from different projects returned 200. Can someone add more detailed steps to reproduce the problem (maybe I do not understand something well)? or a test that fails on the current trunk?

#5 - 2018-12-21 06:22 - Mizuki ISHIKAWA

- File fix\_403\_cm\_new\_watchers\_v2.patch added

In order to reproduce this problem I needed to input a search keyword in "Search for user".  
When entering the search keyword, the request parameter is **Parameters: {"object\_type"=>"issue", "q"=>""} .**

```
<!-- app/views/watchers/_new.html.erb -->
<%= javascript_tag "observeSearchfield('user_search', 'users_for_watcher', '#{ escape_javascript url_for(
:controller => 'watchers',
      :action => 'autocomplete_for_user',
      :object_type => (watchables.present? ? watchables.first.class.name.underscore : nil),
      :object_id => (watchables.present? && watchables.size == 1 ? watchables.first.id : nil),
```

```
:project_id => @project) }') " %>
```

If there are multiple watchable and multiple watchable projects, both `object_id` and `project_id` will be nil.

Those parameters are required for `WatchersController#find_project` to work.

Because `WatchersController#find_project` does not work, `ApplicationController#authorize` returns an exception "Filter chain halted as: authorize rendered or redirected".

I have made several changes by reading the patch written by Andrey Lobanov (RedSoft).

I appreciate that you shared the patch.

Changes:

- Add tests
- Make multiple watchable values of `object_id` instead of `project_ids`
- Change the conditions of `users_for_new_watcher` to maintain the specification of [#5159](#)

#### #6 - 2018-12-30 06:11 - Go MAEDA

- Target version set to Candidate for next minor release
