Redmine - Patch #3008

Wrong height of content container on My Page

2009-03-18 23:49 - Uwe Koloska

Status:	Closed		**Start date:**	2009-03-18

Target version:				

Description

Because the two columns of My Page are both configured as float in the CSS, the height of the surrounding <div> is not calculated correctly and in the default theme and all themes derived from it, given by the min-height. The effect can be seen in the attached screenshot: MyPage.png.

The attached path solves this by adding a <div> with a float clear:both style and was made against the current r2598 of the 0.8-stable branch.

- File mypage_clearfloat2.diff added

Ah, yes, a very good point. And even better the link this site points to: Simple Clearing of Floats This leads to a very nice solution. Thank you!

I hope that public/stylesheets/application.css is the right place for this CSS magic.
