<b>Description</b>	
<p>I want feature to add other HTML pages/application within Redmine application and run from the same server. Currently i have moved the application inside "Public" folder in Redmine app. So that i am abled to access the same as</p> <p>"http://redmine_app_link/my_application" "http://redmine_app_link/my_application/page1" "http://redmine_app_link/my_application/page2" etc</p> <p>But this application opens without authentication from Redmine. If I just point to the path it opens without Authentication.</p> <p>Is there any possibilities to integrate Redmine Authentication to open these web html page in this folder. Or any mechanism/folder where i can move my html app and link inside redmine. Please suggest how to go ahead.</p> <p>My environment details are as follows</p> <p>Environment:</p> <p>Redmine version 3.4.6.stable Ruby version 2.3.3-p222 (2016-11-21) [i386-mingw32] Rails version 4.2.8 Environment production Database adapter Mysql2</p> <p>SCM:</p> <p>Subversion 1.10.2 Git 2.17.1</p> <p>Redmine plugins: no plugin installed</p>
