Description			
Dear,			
Within the Synology Package Center, Redmine 3.3.6 is available. However, some very usefull features which I'm searching for, are available in the newer versions (3.4).			
Somehow, I prefer to stay within the packages - in order not to ruin my Nas, as I'm not an expert. So it would be great to know how/when this package will be upgraded.			
Any idea who performs the upgrade of the Redmine package within the Synology Package Center - and when this is scheduled? Or any other usefull info how to upgrade this Docker Redmine Package from the Package Center to a more recent version?			
Thank you and kind regards, David
