Redmine - Feature #31215
Macro child_pages should support reverse order

2019-04-17 10:32 - Miodrag Milic

Target version:				
Resolution:				

Description

This is more appropriate for some contexts, for example monthly reports which you want sorted chronologically in reversed order

Example:

`{{child_pages(reverse, depth=2) }}`

History

+1

This is very helpful when storing documentation/protocols in a wiki. Atm one has to scroll down a lot when there are lots of entries. We tried Documents, but there is no changelog.

#2 - 2020-05-24 14:25 - Go MAEDA

- Category set to Text formatting

#3 - 2021-06-29 11:45 - F. P.

- File reverse.patch added

First: I'm no ruby developer.

I tried to extend the child_pages macro with the suggested reverse argument.

I would be glad if someone could:

- check if the code is sane
- test this in a development setup

Patch is attached. If I can do something else please point me in the right direction.
