

Redmine - Feature #31278

Change Delete button name to Delete issue

2019-04-29 21:41 - Frederico Camara

Target version:	5.0.0		
Resolution:			
Description			
<p>I noticed some users would click on the edit button to edit a commentary, and then on the delete issue button on the bottom of the page (on the action menu), and then confirm. It happens sometimes, most of our users don't have the permission to delete an issue, but I've had project managers doing this from time to time when they are tired.</p> <p>The patch is very trivial, it changes the name of the button from "Delete" to "Delete Issue". So as it is not mistaken for "Delete what is selected", which is the expected behavior for some users.</p>

BTW: I probably am forgetting the tests.

#2 - 2019-04-30 14:18 - Frederico Camara

Tests checked. No tests for this.

#3 - 2019-04-30 14:37 - Marius BĂLTEANU

Which version of Redmine do you use?

- File 0021-Change-Delete-issue-button-behaviour.patch added

Slightly different Patch (for Redmine 4.1), renames button to Delete Issue and shows the button only on top menu (hides it from the menu near the issue history).

Marius, your patch addresses a different problem. My problem is the user sometimes mistakes the "delete this comment" icon for the "delete this issue icon". Both have the same caption and depending on how you configure your redmine, can sometimes be close on the bottom part of the interface. That I know, it happened three times where I work, with different users. And it was a pain restoring the data from the logs, and the attachments from the backups.

My patch mostly addresses the **delete issue** icon on the bottom part of the interface, I don't mind the non destructive actions:

- it changes the caption to differentiate between the two actions
- it changes the **actions menu** behaviour at the bottom part of the interface:
 - at first I was removing the **actions menu** entirely, because it was a repeat. But it is very helpful there
 - now I am removing just the **delete issue** from the bottom **actions menu**. If the user wants to delete the issue, he can use the button on the **actions menu** on the top.

- File 31278.patch added

+1

I have seen so many accidents that people accidentally delete an issue. In my observation, such accidents often occur in the following situations. I believe that the suggested change greatly reduces such accidents.

- When trying to delete an issue comment which is displayed at the bottom, they misunderstand the "Delete" in the action menu at the bottom as a button to delete a comment
- When trying to remove a relation to another issue, they misunderstand the "Delete" in the context menu as a menu item to remove the relation

I am attaching an updated patch. It uses an existing i18n string button_delete_object added by [#34494](#) instead of adding a new string. Also, it updates tests.
