Target version:	Candidate for next major release		
Resolution:			
Description			
<p>After #31110, we can't install plugin tarball like "foo-plugin-x.y.z" without rename. I want install plugin only stable version. I don't want use svn trunk/git master. And I want to know plugin version easily with its directory name.</p> <p>I want change default directory like below if I can.</p> <pre>diff --git a/lib/redmine/plugin.rb b/lib/redmine/plugin.rb index b3982fcfd..f75f181be 100644 --- a/lib/redmine/plugin.rb +++ b/lib/redmine/plugin.rb @@ -96,7 +96,10 @@ module Redmine # Set a default name if it was not provided during registration p.name(id.to_s.humanize) if p.name.nil? # Set a default directory if it was not provided during registration - p.directory(File.join(self.directory, id.to_s)) if p.directory.nil? + if p.directory.nil? + dirname = File.basename(File.dirname(block.source_location[0])) + p.directory(File.join(self.directory, dirname)) + end unless File.directory?(p.directory) raise PluginNotFound, "Plugin not found. The directory for plugin #{p.i d} should be #{p.directory}."</pre>

After [#31110](#), we can't install plugin tarball like "foo-plugin-x.y.z" without rename.

Even without [#31110](#), many plugins don't work if a plugin with the id "foo-plugin" is installed under the directory other than "plugins/foo-plugin".

Anyway, your patch which allows plugins to be placed under any directory name is a nice improvement. I would like to get more feedbacks from plugin developers.

Anyway, your patch which allows plugins to be placed under any directory name is a nice improvement. I would like to get more feedbacks from plugin developers.

As Go MAEDA san knows, Redmine::Plugin.register is called from init.rb. So, my patch indicates plugins/foo-plugin only if init.rb was required from other codes..
