- Status changed from New to Needs feedback

On which tab do you refer? The filter options are saved in the session only for issues, for time entries not (you can see why #24581#note-2).

Hi Marius,

yes i refer to issues. Users change the columns and apply, and then close the browser, the columns will be reset to default values from Administration-Settings-IssueTracking, while user session is not expired.

Method to reproduce:

1. Show "Issues" of project A, and make some changes (such as sort/columns);
2. Switch to project B, you will find the default setting value for columns and sort of the site is loaded.
3. Switch back to project A, changes made by step 1 is lost, settings for columns or sort is set to site default too.
