

Redmine - Patch #32370

Action menu on issues details should not flip with the history order

2019-10-30 06:05 - Bernhard Rohloff

Status: New	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: UI	Estimated time: 0.00 hour
Target version:	
Description	
<p>By now, when one choose reverse chronological order to display the history of an issue the action menu flips to the top between the issue and the history. Since the action menu isn't related to the history it's not expected by the user. It also causes occasional rendering problems for some users (http://www.redmine.org/boards/1/topics/57345), too. The action menu should always stay on the bottom of the view.</p>

I think the current position is convenient when adding notes to the same issue one after another (sometimes I do that when I maintain a server. I paste commands that I entered one after another).

If the action buttons are placed at the bottom, I have to scroll down to add another note.

I think #32009 is a very good proposal for that.

#7 - 2019-12-22 17:35 - Andrew Reshetov

- *File changed-clear-to-left.patch added*

The problem is that sidebar is also positioned with float property (float: right) and div with clear:both (which placed around div.contextual) block float and add gap.

I changed clear property on left and page displays correct after.

In 4.1+ version float was replaced with flex. So this problem actual for 4.0- versions only.
