Description

The calendar view is unreadable (please see attached screenshot).

This is due to [r2568](#) which adds the issue CSS class to the calendar entry.

So either Issue#css_classes shouldn't use the issue CSS class or application.css should define other styles for issue when inside table.cal.

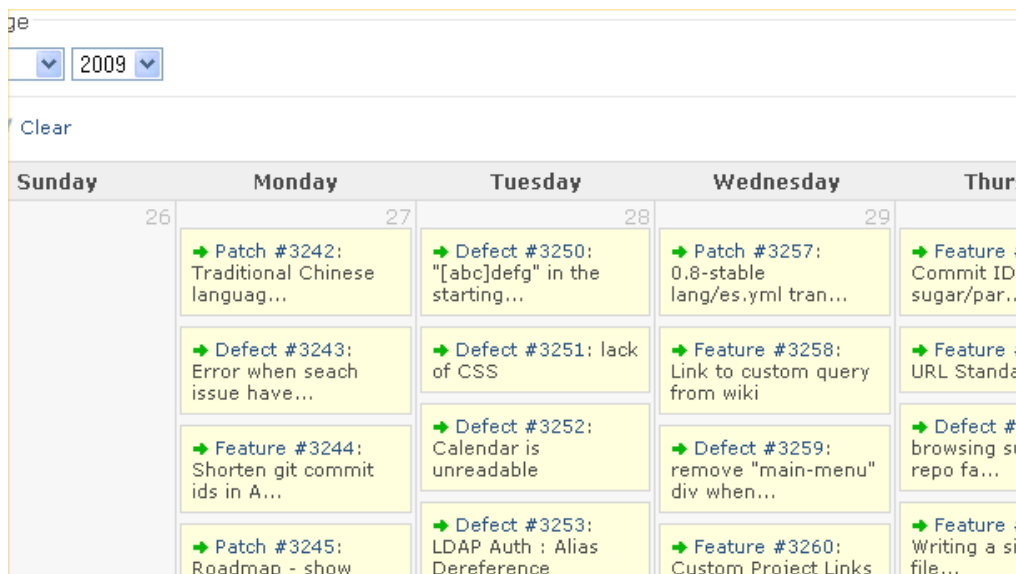

"trunk" is probably also affected but I didn't test that.

History

#1 - 2009-05-10 11:17 - Jean-Philippe Lang

- File calendar.png added

Do you have some theme installed or something?
Because with no css modification, here is what I get:

#2 - 2009-05-18 12:18 - Thomas Löber

- Status changed from New to Resolved

Sorry, this was my fault.

I set

```
div.tooltip { display:inline; }
```

in a plugin's stylesheet asset because the plugin shows a tooltip with user custom fields on a "link_to_user" and this link has to be inline.

I will try to find another solution to the problem.

#3 - 2009-06-14 10:42 - Jean-Philippe Lang

- Status changed from Resolved to Closed
- Affected version (unused) deleted (0.8.3)
- Resolution set to Invalid
- Affected version deleted (0.8.3)

OK
