<b>Description</b>			
Here is my conf: Postgresql 8.3.7-1; Ruby 1.8.7; Rails 2.3.2; Redmine 0.8.3			
The problem is when you export Wiki page to HTML all local anchor link are converted to html links. For example (space between [ and ] puts for notextile):			
Wiki			
<code>[ [Wiki_page_name#some_anchor link_text] ]</code>			
HTML			
<code>&lt;p&gt;&lt;a href="Wiki_page_name.html" class="wiki-page"&gt;link_text&lt;/a&gt;&lt;/p&gt;</code>			
This conversion makes link unreachable.			
After changing <code>:wiki_links =&gt; :local</code> on <code>:wiki_links =&gt; :anchor</code> in <code>/app/views/wiki/export.rhtml</code> anchors link starts convert to			
<code>&lt;p&gt;&lt;a href="#Wiki_page_name" class="wiki-page"&gt;link_text&lt;/a&gt;&lt;/p&gt;</code>			
After changing			
<code>format_wiki_link = Proc.new { project, title, anchor  "##{title}" }</code>			
to			
<code>format_wiki_link = Proc.new { project, title, anchor  "##{anchor}" }</code>			
in <code>/app/helpers/application_helper.rb</code> conversion works fine.

I'm not sure to understand your problem.

If you're exporting a single wiki page, links to other pages needs to point to another HTML file. Of course, if this page was not exported, the link is unreachable.

Maybe you could attach a full example (raw text, HTML export and expected HTML export).

- *File 3\_expected\_export.html added*

My problem is converting local links which points to local anchors in the same HTML file.

Should be fixed in trunk with [r7558](#).
