

Redmine - Feature #32844

The ability to change the 404 not found screen on each site

<b>Target version:</b>			
<b>Resolution:</b>			

**Description**

If the specified page does not exist, many websites will not just display a 404, Navigate user actions by displaying search boxes and links to related information.

For example, Github displays not only a 404 but also a search box and related information links.

An example  
<https://github.com/redmine/redmice>

However, in the case of Redmine, if the entered issue-no or project-identifier does not exist, it simply displays 404, a search box, and a link to the TOP screen.

An example  
<https://redmine.org/issues/99999>

**Proposal**

If you make it possible to display messages and links created on each site instead of simply displaying the fixed phrase of 404, I think that you can navigate the user's actions and use Redmine more effectively.

I want a search box, a link to the TOP screen and related information, and an image.

We can deal with it by changing render\_404 of controllers / application\_controller.rb, But it is not a very good way.  
Please let me know if there are existing methods.
