

Redmine - Feature #32844

The ability to change the 404 not found screen on each site

Description	
<p>If the specified page does not exist, many websites will not just display a 404, Navigate user actions by displaying search boxes and links to related information.</p> <p>For example, Github displays not only a 404 but also a search box and related information links.</p> <p>An example https://github.com/redmine/redmine</p> <p>However, in the case of Redmine, if the entered issue-no or project-identifier does not exist, it simply displays 404, a search box, and a link to the TOP screen.</p> <p>An example https://redmine.org/issues/99999</p>	
Proposal	
<p>If you make it possible to display messages and links created on each site instead of simply displaying the fixed phrase of 404, I think that you can navigate the user's actions and use Redmine more effectively.</p> <p>I want a search box, a link to the TOP screen and related information, and an image.</p> <p>We can deal with it by changing render_404 of controllers / application_controller.rb, But it is not a very good way. Please let me know if there are existing methods.</p>
