

Redmine - Defect #32861

Strange issue tree after importing subtasks

2020-01-24 17:24 - Adam Oscilowski

Status:	Needs feedback	Start date:	
Priority:	Normal	Due date:

Target version:		Affected version:	
Resolution:			
Description			
<p>We have imported subtasks to RM using csv: "Temat";"Typ";"Start";"Koniec";"Parent";"Description";"Autor" "Some Subject1";"Development";"2020-01-15";"2020-03-31";"#68";"some desc";"autor" "Some Subject2";"Development";"2020-01-15";"2020-03-31";"#68";"some desc";"autor" "Some Subject3";"Development";"2020-01-15";"2020-03-31";"#68";"some desc";"autor"</p> <p>Tasks have been imported correctly, according to RM messages. But they are displayed in strange way. Picture: 1. Looks like this task is assigned to multiple parent tasks? When I call API http://*/issues.json?issue_id=152, only 68 is mentioned as a parent - OK. When I call API http://*/issues/68.xml?include=children, 152 is mentioned as a child - OK. When I call API http://*/issues/65.xml?include=children, 152 is NOT mentioned as a child - OK. BUT when I open tasks 65-68 via web, I can see task 152 in each of them as a subtask, while it should be a subtask of 68 only. - NOOK. 152 opened via web looks like in attachment.</p> <p>2. Tasks: 65,66,67,68 have common parent: 64 and are on the same level. In this picture it looks like 65 is a child of 64, 66 a child of 65 and so on. But it looks fine when I open i.e. task 65 - it's a child of 64 only.</p>			

History

#1 - 2020-01-27 08:26 - Go MAEDA

Could you try the following command to fix the tree?

```
bin/rails r 'Issue.rebuild_tree'
```

#2 - 2020-06-26 03:48 - Go MAEDA

- Status changed from New to Needs feedback
