#### Description

Hi All.

I'm new with this redmine but I have somehow managed to install it successfully and are very happy with it. I just migrated our development management from Trac to Redmine and couldn't be happier with that decision. One thing while I'm learning that I couldn't figure out how to do it the right way is this:

I have multiple projects that are organized this way.

Main Project: Project Enterprise

Subproject: Project1, Project2, Project3, Project4

How would you suggest I organized them in the Roadmap so that I can have the roadmap shown in this format? I have redmine 0.8.3 installed on FC 9 using Ruby Enterprise and Passenger. Thank you so much for all of your help and suggestion.

WestDude
