Target version:	Affected version: 3.4.4
Resolution: Invalid	

Description

I need a help from you. my task is dockerized my current redmine.
almost 2 week I am working on this task.
I copied public folder from host redmine to docker container redmine/public
I copied all plugins and installed successfully
but problem is image,my theme background image, wiki image is not dispaly.

I think my docker redmine is not find path to image.

any one know how to display image?

I will explain what step i do so far.

```
docker network create --driver bridge redmine_network
docker volume create postgres-data
docker volume create redmine-data
docker container run -d \
  --name postgres \
  --network redmine_network \
  -v postgres-data:/var/lib/postgresql/data \
  --restart always \
  -e POSTGRES_PASSWORD='password' \
  -e POSTGRES_DB='redmine' \
  postgres:latest
docker container run -d \
  --name redmine \
  --network redmine_network \
  -p 80:3000 \
  --restart always \
  -v redmine-data:/usr/src/redmine/files \
  -e REDMINE_DB_POSTGRES='postgres' \
  -e REDMINE_DB_DATABASE='redmine' \
  -e REDMINE_DB_PASSWORD='password' \
  redmine:latest
```

inside the container i install some package and gem for my plugins

```
docker exec -it redmine bash
apt update
apt install build-essential libpq-dev pkg-config libmagickwand-dev ruby ruby-dev
bundle install --no-deployment
gem install will_paginate
gem install jenkins_api_client
gem install activesupport -v 4.2.8
```

```
gem install haml-rails -v 1.0
gem install deface -v 1.0.2
gem install brakeman -v 4.8.0
bundle updates
```

docker redmine log file

anyone could explain how to clear this error.. please

History

#1 - 2020-03-19 02:20 - Mizuki ISHIKAWA

This is a question about the steps to build the environment, not a problem of Redmine itself.

If you want to solve this problem, it is appropriate to consult in the [forums](#) or the redmine image repository.

When I ran that command in my environment, the image was displayed correctly.
