

Redmine - Defect #33290

Unnecessary database access when IssueQuery class is defined

2020-04-15 10:49 - Kevin Fischer

| Target version: | 4.2.0 | Affected version: | |
| Resolution: | Fixed | | |
| Description | | | |
| <p>During plugin development I found out that the definition of the Query class accesses the database just by being defined.</p> <p>The reason for this is the `groupable` method in the `TimestampQueryColumn` class which tries to access the current user.</p> <p>https://github.com/redmine/redmine/blob/4.1.1/app/models/query.rb#L89-L93</p> <p>This method is called during the constructor (which is called in the query column definitions in the class body of IssueQuery)</p> <p>https://github.com/redmine/redmine/blob/4.1.1/app/models/issue_query.rb#L36-L51</p> <h3>Why is this a problem?</h3> <p>In case your database is not yet created and/or migrated, any source code which just references the IssueQuery class will raise an exception since it cannot find the database/table.</p> <p>And in general I think it's not good to access the database just by defining a class.</p> <h3>Patch</h3> <p>I attached a patch which also acts as a code cleanup/refactoring. It moves the group by statement into its own method. Before the boolean property `groupable` was just redefined to contain the group by statement as well, which was confusing in the first place in my opinion.</p> <p>I ran all tests locally and they passed.</p> | | | |

Unnecessary database access when IssueQuery class is defined (#33290).

Patch by Kevin Fischer.

History

#1 - 2020-04-15 10:59 - Go MAEDA

- Related to Feature #2679: Ticket grouping added

#2 - 2020-04-15 11:40 - Kevin Fischer

This only happens from Redmine 4.1 by the way.

The commit bringing the change was [r17724](#)

#3 - 2020-04-15 14:19 - Alexander Meindl

I can confirm this problem with Redmine 4.1. It is very difficult to test plugins with the bug.

#4 - 2020-04-15 16:03 - Go MAEDA

- *Related to Feature #13803: Implement grouping issues by date (start, due, creation, update, closing dates) added*

#5 - 2020-07-07 04:36 - Kevin Fischer

Is there any chance this change will be considered for the next version?

If you reference the IssueQuery class in a plugin's init.rb file (to include a module with new functionality) it becomes impossible to create a new database (which is very inconvenient when running for example tests on a CI system) since the system complains about the User table not yet existing.

A class definition should not need to access the database.

#6 - 2021-01-16 05:55 - Kevin Fischer

Trying the patch out with the most recent master, the tests don't seem to pass for SQLite.
I will fix the patch and post an updated version soon.

- *Related to Defect #33121: IssueQuery not usable from plugins added*

#8 - 2021-01-24 22:59 - Marius BĂLTEANU

- *Category set to Plugin API*
- *Assignee set to Jean-Philippe Lang*
- *Target version set to 4.1.2*

Jean-Philippe, can you take a look on this and the related issue ([#33121](#))?

#9 - 2021-02-05 11:55 - Kevin Fischer

- *File 0001-stop-db-access-on-class-definition-v2.patch added*

I fixed the patch so it works for SQLite, too. Also, I refactored the code around `groupable` a little bit more to make it more obvious that it is a boolean property.

#10 - 2021-03-15 22:23 - Marius BĂLTEANU

- *Target version changed from 4.1.2 to 4.2.0*

I'm assigning this to [4.2.0](#) because the changes are too big for a minor version.

- *Has duplicate Defect #33121: IssueQuery not usable from plugins added*

#13 - 2021-03-18 20:08 - Marius BĂLTEANU

- *Tracker changed from Patch to Defect*
- *Status changed from New to Confirmed*
- *Assignee changed from Jean-Philippe Lang to Go MAEDA*

I've confirmed the issue and the second patch posted by Kevin looks good to me. All tests pass:
