

Redmine - Defect #33374

hook call "view_layouts_base_body_bottom" Inserts content below the viewport

2020-04-29 15:52 - Oliver Köhler

Status:	Confirmed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Plugin API	Estimated time:	0.00 hour
Target version:		Affected version:	4.1.1
Resolution:			
Description			
<p>The content added via the "view_layouts_base_body_bottom" Hook is generated outside of any wrapper object. With r18427 the size of the wrapper object is set to 100% of the viewport height. As "view_layouts_base_body_bottom" places content outside of that wrapper, that content is now displayed outside of the viewport. A possible fix could be placing the</p> <pre><%= call_hook :view_layouts_base_body_bottom %></pre> <p>line within the wrapper object like this</p> <pre><div id="footer"> Powered by <%= link_to Redmine::Info.app_name, Redmine::Info.url %> &copy; 2006-2020 Jean-Philippe Lang </div> <%= call_hook :view_layouts_base_body_bottom %> </div></pre>			

History

#1 - 2020-04-29 16:31 - Oliver Köhler

Forgot to mention the file for the possible fix:

app/views/layouts/base.html.erb

#2 - 2020-05-02 06:49 - Go MAEDA

- Status changed from New to Confirmed

I have confirmed that a user has to scroll down to see the content inserted with view_layouts_base_body_bottom as reported by Oliver Köhler.

But I am not sure whether moving the position of view_layouts_base_body_bottom is the best solution because the change makes an inconsistency.

The inconsistency is that the view_layouts_base_top is currently placed right after the <body>, but the view_layouts_base_bottom will no longer be placed right before the </body> after applying the fix.

Maybe fixing this by somehow updating the CSS is better?
