Here are two patches that update jQuery to 3.5.1 and fix a problem caused by this change.

Because the update can break some plugins, I propose the following plan for this update:

1. Commit the current patches
2. Keep this ticket open for one or two months in order to have time to find potential problems generated by the update
3. After this period, commit jQuery Migrate
4. In Redmine 5.0.0, remove jQuery Migrate and keep only the latest jQuery version.

Thank you for working on updating JQuery.

I agree. In order to make enough time to discover and fix issues caused by the update, I think it is better to commit the patches as soon as we can.

Do you think it is OK to commit the patches right now?

#5 - 2020-06-02 15:14 - Go MAEDA

- Target version changed from Candidate for next major release to 4.2.0

I think it is better to commit this patch as soon as possible in order to detect problems early. Setting the target version to 4.2.0.

#6 - 2020-06-03 15:25 - Go MAEDA

- Status changed from New to Resolved

- Assignee set to Go MAEDA

- Resolution set to Fixed

Committed the patches. Thank you.

Six months have passed since upgrading JQuery to 3.5.1. I think it is time to add jquery-migrate. Marius, what is your opinion?
