<b>Description</b> Hello, I think the logic should be: - every user should be allowed to make custom queries visible to him (permission for making them, or everyone is allowed if you like); - the user should be allowed to make these queries public (report, per user permission, like this that already exist; - a little bit easier access to them should be done. Maybe on the issues page - drop-down or something to get quick access to them.  Thanks, Nikolay	

### History

#### #1 - 2007-06-23 09:50 - Jean-Philippe Lang

Added per user custom queries in rev 566.

Any logged in user can now save queries (they are not visible to the other users).

Only users with explicit permission can manage queries that are visible to anyone.

The queries list is removed from the "Reports" view.

It can now be accessed from the issues list.
