Target version:		Affected version:	3.4.4
Resolution:	Invalid		
Description			
Hello developer,			
I have 3 server and I install redmine on all my server and I synchronized my database using PAF(High-Availibility for Postgres, based on Pacemaker and Corosync).			
server1 master server2 slave1 server3 slave2			
Now I want to migrate this folder from my old redmine to new redmine. how to synchronize /var/lib/redmine/default/files/ to my new servers.			
I copied all files from old server (/default/files/) to server1 , it about 25gb. and I copy plugins, themes and images etc.			
how can I make replica for server2 and server3?

- Status changed from New to Closed
- Resolution set to Invalid

Please use forum for question after reading [How to request help](#).

Redmine doesn't offer any file replication between multiple servers, you should use a protocol like [NFS](#) or something similar.
