<b>Description</b>	
<p>Syntax highlighting in redmine only supports one parameter <code>class="{language}"</code>.</p> <p>Rouge actually has additional parameters to control e.g. the highlighting of single or multiple lines.</p> <p>Source: <a href="https://github.com/rouge-ruby/rouge#formatters">https://github.com/rouge-ruby/rouge#formatters</a></p> <pre>Rouge::Formatters::HTMLLineHighlighter.new(formatter, highlight_lines: [3, 5]) will split your code into lines and wrap the lines specified by the highlight_lines option in a span with a class name specified by the highlight_line_class option (default: h11).</pre> <p>Can the redmine be extended to support these parameters?</p> <p>Best regards</p>
