<b>Description</b>			
<p>We have been using Redmine since more than 2 yrs now. After our clients get comfortable with redmine, we have had requests asking for their own instance of redmine. It will be great if there is a per-project migrate feature too. Some script that will backup the records particular to a proj and the associated files.</p> <p>I should be able to just upload the package to redmine for it to autodeploy on another instance. Heck, I may start getting this done and submit a patch/module for backup and restore.</p>
