

Redmine - Patch #35081

Update config/environments/*.rb for Rails 6.1

2021-04-13 04:21 - Go MAEDA

Description	
<p>The attached patch updates Rails environment files (development.rb, production.rb, and test.rb in config/environments directory) for Rails 6.1.</p> <p>By updating the files, several useful new features in Rails 6.1 will be available (e.g. request_id in production.log, verbose_query_logs in development.log). Also, by looking at the commented out settings, the user can easily know what settings are available (e.g. config.force_ssl in config/environments/production.rb).</p>

The patch adds two settings in config/environments/production.rb which are already defined in config/application.rb with the same value:

- config.log_level = :info already defined in source:/trunk/config/application.rb#L77
- config.i18n.fallbacks = true already defined in source:/trunk/config/application.rb#L57

Also, even commented, I don't think that we should settings add which are not working in the current context, for example, enabling config.assets.css_compressor = :sass it will break Redmine (at least in my local environment).
