Description For individual Issue view page format. Would like a more customizable way to group/position the custom fields. Currently, trackers with many fields can be a blur of info and needs some grouping/spacers to make finding information faster/easier. Request: The most important part would be having a way to add grouping headers, spacers, or notes between custom fields per tracker that looks clean and assists in readability. Ideal: I think a custom positioning checkbox per tracker, and then allow custom indexing/ordering of custom fields and allow creating spacers and grouping headers with alignment and/or grid choices would be amazing. This also could extend to project custom fields and other custom fields, but not really as useful as it would be for issues.
