

Redmine - Defect #35309

Hyperlinks ending in "\$" will be truncated (the trailing "\$" sign will not be part of the URL to be pointed to)

2021-05-25 14:33 - Immanuel Wilhelmy

Status:	New	Start date:	
Priority:	Normal	Due date:

Category:	Text formatting	Estimated time:	0.00 hour
Target version:		Affected version:	4.1.0
Resolution:			
Description			
<p>Hyperlinks ending in "\$" will be truncated (the trailing "\$" sign will not be part of the URL to be loaded).</p> <p>e.g.:</p> <p>https://this.is.a.example/withtrailing\$ (hover over the URL and look what is shown in the browser status line, resp. you see the "\$" is not contained in redmine's URL).</p> <p>Our Mail-URL-Scanner replaces incoming URLs with redirects to the scanner. The generated new URL contains a trailing "\$", so the URLs are no more recognized by the scanner and do not work.</p>			

History

#1 - 2021-05-26 10:29 - Guillermo ML

I think is related to #30259#note-4:

Guillermo ML wrote:

Same with ?, &, # and \$ characters. These URL:

<https://example.org/ticket.form.php?id=333?>

<https://example.org/ticket.form.php?id=333&>

<https://example.org/TicketID=455#>

[https://example.org/TicketID=455\\$](https://example.org/TicketID=455$)

will be rendered (3.4.4.stable) as:

</attachments/22153/output.trailing.special.characters.png>

For example the second link could be generated by [glpi](#) tool and the third one is sometimes generated by [otrs](#) tool. I think all four are valid characters at the end of an URL.
