Redmine - Feature #35388
Search filters in top bar

Description

Searching takes a very long time when there are lots of text fields included in the search.

Would like a way to filter the search (projects, issues, etc.) from the top bar without going to the search page first.

History

Oops forgot to add.

Would like to add a filter parameter for the projects category to include open/closed projects.

edit:
I just realized there is a link to the search page and never knew it until now - so ignore that portion... this is a testament to how much I avoid the search function due to how long it takes
but would still like a way to filter from the top bar, like a small button to show the filters categories

#2 - 2021-06-10 06:44 - Bernhard Rohloff

- Subject changed from Search filters in top bar or Link to search page to Search filters in top bar

- Description updated

- Status changed from New to Needs feedback

I think that's a feature by itself and therefore deserves the creation of a separate issue.

It took me years to find this feature. ;-)

I've modified the topic and description in accordance. Please check if it meets your expectations?

lol
Great, Thanks!
