<b>Resolution:</b>	Invalid		

#### Description

Hi! I am developing a server for my university and it turns out that I am using Redmine, but I am a newbie and I have tried many tutorials and none of them work for me. It turns out that I install RoR and Redmine on my virtual machine (ubuntu 20.04) and I upload to Heroku and the basics works, but I have not been able to configure the **STMP** and the repository to perform an **SCM**. Someone could help me? At this time the SCM part is more important of my project.
