Description	
<p>It would be nice to display the thumbnail of files/images, that are attached to an document, before the list of files (in some cases). I have a document enum to act as a catalog of images, and when the document has more than a few images, the users have to scroll down far to see the images. Here's a small example of the "as is", with the files listed BEFORE thumbnails (feature request is for AFTER).</p> <p>Screenshot_20210714_203258.png</p> <p>Thank you!</p>
