Maybe you could try to see why svnadmin fails on your system when running with cron.

#2 - 2009-12-26 13:18 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to No feedback

#3 - 2010-01-18 17:23 - Joachim Fritschi

You have to append the option:

--command='/usr/local/bin/svnadmin create'

FreeBSD has installs all ports in /usr/local. Crontab only has PATH=/etc:/bin:/sbin:/usr/bin:/usr/sbin set. This means reposman wont find the svnadmin binary unless you extend your PATH or add the custom path.
