Description

For my Browser-Bookmarks I need a RSS/Atom Feed, which delivers a list of all Projects. With a Link to each Ticket page. It should be like here: <https://www.redmine.org/projects>
But the Atom-Feed on this page delivers the "newest projects" instead of "all projects" as in the HTML view.
Is there any way to get this?
Thank you for your support.

History

I took a look to the plugins, but there is no match :(
Has anyone another idea?

#2 - 2022-04-05 09:13 - Gernot Ploiner

The Feed from this page (bottom): <https://www.redmine.org/projects> delivers also hidden Projects. I need only active.
I found an API, but is this the only way? :(

I think you can get all projects via the feed by increasing the value of "Maximum number of items in Atom feeds" in Administration > Settings > General.
