History

- #1 - 2022-04-01 01:21 - Go MAEDA
- Related to Feature #10253: Better handling of attachments when validation fails added
- #2 - 2022-04-01 01:29 - Go MAEDA
- Category set to Administration

Redmine 5.0 has four "prune" tasks. I think it would be even better if some of them are integrated into Administration pages as well.

```
$ bin/rake -T | grep prune
rake redmine:attachments:prune      # Removes uploaded files left unattached after one day
rake redmine:tokens:prune           # Removes expired tokens
rake redmine:users:prune             # Removes registered users that have not been activated after
a number of days
rake redmine:watchers:prune          # Removes watchers from what they can no longer view
```
