

## Redmine - Defect #36967

### issue#create difference error patterns between project\_id inside and outside with none member condition

2022-04-16 09:51 - Taro Matsuzawa

<b>Status:</b>	New	<b>Start date:</b>	
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	0%
<b>Category:</b>	Issues	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected version:</b>	5.0.0
<b>Resolution:</b>			
<b>Description</b>			
issue#create accepts both project_id inside and outside with none member condition. The project_id inside pattern. (Pattern 1)			
<pre>curl -v -H "Content-Type: application/json" \   -d '{"issue":{"project_id":5,"subject":"None member issue","tracker_id":1}}' \   'http://localhost:3000/issues.json?key=(key)'</pre>			
The project_id outside pattern. (Pattern 2)			
<pre>curl -v -H "Content-Type: application/json" \   -d '{"project_id":5,"issue":{"subject":"None member issue","tracker_id":1}}' \   'http://localhost:3000/issues.json?key=(key)'</pre>			
If the project_id is not behind the user, the pattern 1 returns 422 error, but the pattern 2 returns 403 error. Which error is correct?			

### History

#### #1 - 2022-04-18 09:56 - Mizuki ISHIKAWA

I was able to reproduce the same behavior.

- Pattern 1: POST request to <http://localhost:3000/issues>. When the create action is executed by the request, the ticket will result in a validation error.
- Pattern 2: The same processing occurs as when you send a POST request to <http://localhost:3000/projects/5/issues>. An error occurs before the create action starts because you do not have permission to POST access <http://localhost:3000/projects/5/issues>.

Pattern 1 and Pattern 2 seem to have different status codes because the process failed at different times in the code.
