

Redmine - Defect #36969

EmailAddress regex matches invalid email addresses

2022-04-17 09:07 - salman mp

|---|---------------------------|--------------------------|-----------|
| Status: | New | Start date: | |
| Priority: | Normal | Due date: | |
| Assignee: | | % Done: | 0% |
| Category: | Accounts / authentication | Estimated time: | 0.00 hour |
| Target version: | 5.1.0 | Affected version: | |
| Resolution: | | | |
| Description | | | |
| <p>There is a regex in the EmailAddress class, that matches some invalid email address like these:</p> <pre>test,email@example.com ,test@example.com \$test@example.com</pre> <pre>class EmailAddress < ActiveRecord::Base include Redmine::SafeAttributes EMAIL_REGEX = /\A(?:[^\s]+)@((?:[-a-z0-9]+\.)+(?:(?:xn--[a-z0-9]+) (?:[a-z]{2,})))z/i</pre> <p>Maybe better to use URI::MailTo::EMAIL_REGEX instead.</p> | | | |

History

#1 - 2022-04-18 10:43 - Go MAEDA

- File 36969.patch added
- Category set to Accounts / authentication
- Target version set to 5.1.0

Setting the target version to 5.1.0.

#2 - 2022-04-20 02:44 - Go MAEDA

- File 36969-v2.patch added

Added a test to the patch.

#3 - 2022-04-21 08:44 - Mischa The Evil

- Description updated

This effectively changes EmailAddress::EMAIL_REGEX from:

```
\A(?:[^\s]+)@((?:[-a-z0-9]+\.)+(?:(?:xn--[a-z0-9]+)|(?:[a-z]{2,})))z/i
```

to:

```
/^[a-zA-Z0-9.!#$%&*+|=?^_`{}~]+@[a-zA-Z0-9](?:[a-zA-Z0-9]{0,61}[a-zA-Z0-9])?(?:\.[a-zA-Z0-9](?:[a-zA-Z0-9]{0,61}[a-zA-Z0-9])?)*\z/
```

as URI::MailTo::EMAIL_REGEX is defined as such in the Ruby source (<https://github.com/ruby/ruby/blob/master/lib/uri/mailto.rb#L55>).

This definition is effectively a Ruby port¹ of the JavaScript- and Perl-compatible regex example given in the [HTML Living Standard](#):

```
/^[a-zA-Z0-9.!#$%&*+|=?^_`{}~]+@[a-zA-Z0-9](?:[a-zA-Z0-9]{0,61}[a-zA-Z0-9])?(?:\.[a-zA-Z0-9](?:[a-zA-Z0-9]{0,61}[a-zA-Z0-9])?)*$/
```

Some quick notes on this change:

- it fixes the cases of the first two email address examples, but \$test@example.com still matches (and a little search will probably give more edge-cases);
- the current custom regex includes capture groups while URI::MailTo::EMAIL_REGEX doesn't (which changes the return value in some cases and thus may break plugins that depend on the current value of EmailAddress::EMAIL_REGEX) e.g.:

```
'test@example.com'.match(EmailAddress::EMAIL_REGEX)  
=> #<MatchData "test@example.com" 1:"test" 2:"example.com">
```

```
'test@example.com'.match(URI::MailTo::EMAIL_REGEX)  
=> #<MatchData "test@example.com">
```

- given the previous note, this might be something that should be shipped in a major release (6.0.0) instead of a minor release (5.1.0).

I don't think the change should be delivered in 6.0.0 instead of 5.1.0.

In Redmine, the change of version number from 5.0.0 to 5.1.0 is not a minor release but a major release. For example, when the version number changed from 3.0.0 to 3.1.0 or from 4.0.0 to 4.1.0, many new features were added and some plugins stopped working.

If this change cannot be delivered in 5.1.0 due to plugin compatibility, I am afraid that 5.1.0 can only include a few bug fixes and cannot include any new features.
