Description			
<p>Hi,</p> <p>I would like to know how to access the "Link values to URL" of any issue using the REST API.</p> <p>For eg. the tickets in our system can be accessed like below:</p> <p>https://ticket.my_company.de/redmine/issues/ABC-659</p> <p>So, instead of the legacy issue id, I would like to get the id "ABC-659" from the REST API when I get a list of Issue objects.</p> <p>I could not find that under the custom fields.</p> <p>Thanks in advance for any tips and ideas.</p>
