Redmine - Defect #37192

Missing datepicker-en-US.js

2022-06-02 07:31 - Aleksandar Pavic

Status:	New	Start date:	Start date:	
Priority:	Normal	Due date:		
Assignee:		% Done:	0%	
Category:	l18n	Estimated time:	0.00 hour	
Target version:				
Resolution:		Affected version:	4.1.7	
when /projects URL is accessed, and english by default installation is used, this occurs in log file ActionController::RoutingError (No route matches [GET] "/javascripts/il8n/datepicker-en-US.js"):				
I have resolved the issue by copying existing GB file to /public/javascripts/i18n/datepicker-en-GB.js to /public/javascripts/i18n/datepicker-en-US.js				
Since I cannot find another english file				
Perhaps some native USA English speaker should review file and propose changes if any, then submit here for bugfix
