```

The steps I followed during the migration:

1. Copy redmine/files from the old server to the new one and fix permissions.
2. Backup old db and import into the new server.
3. Run sudo rake db:migrate RAILS_ENV=production
4. Reboot.

Since the previous install is very old and this setting probably didn't exist I am getting those errors now. Unfortunately I do not know how to fix my db to stop giving errors with twofa, if anyone knows how to do it please let me know, I am stuck.

Old environment versions:

Environment:

```
Redmine version      3.0.1.stable
Ruby version         2.0.0-p594 (2014-10-27) [i386-mingw32]
Rails version        4.2.0
Environment          production
Database adapter     Mysql2
```

SCM:

```
Subversion          1.8.10
Git                 1.9.5
```

Filesystem

Redmine plugins:
no plugin installed

New environment:

<https://bitnami.com/stack/redmine>

```
Redmine version      5.0.0 stable
Ruby version         3.0.4p208 (2022-04-12 revision 3fa771dded) [x86_64-linux]
```

twofa_scheme is a column on the users table (and thus a method on the User class). The column was introduced some time after the release of 3.0.1. If you get this error in your updated Redmine, it thus means that you have not (fully) run all migrations to update your database to your new version of Redmine.

Make sure you have configured the correct database for the production environment in your config/database.yml and run bundle exec rake db:migrate RAILS_ENV=production again. Also make sure that your application server which is actually running the application is also configured to use the production environment. It may be that it uses some other environment which you may have configured with some other (older) database.
