Description

The configuration page allows for a limited list of pre-defined date formats.
I would like to use a date format like "%Y-%m-%d (CW%V.%u)" to also display calendar weeks.

Is there already a way how to define that? Maybe by adding the addtional format to the right source file.
I could modify some language.yml file, but that is probably not the best solution.

Extending the DATE_FORMATS table in settings.rb seems to be feasable for a local change.
Is it possible to extend that table with the help of a plugin?
