Redmine - Feature #384

svn management for PostgreSQL users

Description
The svn integration is really cool! But it would be even cooler if it could be used by PostgreSQL users in addition to MySQL users.

History

You mean svn integration as described here:
http://www.redmine.org/index.php?id=9
for svn rights management ?

#2 - 2007-06-27 16:36 - Jean-Philippe Lang

Both pam_pgsql and nss_pgsql exist, so it should work.
I'll try test it one of these days.

#3 - 2007-08-25 16:43 - Jean-Philippe Lang

pam_pgsql doesn't support SHA1 (used by Redmine for password
encryption).

#4 - 2007-10-19 01:29 - Piero Sartini

I am running it with postgresql. Since it does not support SHA1
I just switched Redmine over to MD5 passwords.

As far as I understand RoR code (i am a java guy^^) one little
change in User.rb is enough. (just use Digest::MD5 instead of
Digest::SHA1.

#5 - 2007-11-18 15:58 - Jean-Philippe Lang

As of r916, a new (and prefer) way to automate repositories management
is available and described here:
http://www.redmine.org/wiki/1/HowTos

It's designed to work on unix/windows hosts and mysql/postgresql
DB.
