Target version:				
Resolution:			**Affected version:**	

Description

I am using Redmine 5.0.1 with production environment on Windows 10 Professional.

I installed it using Bitnami stack, and upgraded the ruby version to 3.1.4 and it ran successfully. Except I replaced Thin server with PUMA. Now when I use public URL/Domain name to access the site, it shows
http://xxx_public_url/login?back_url=http%3A%2F%2F127.0.0.1%3A3001%2F

I tried each and every step, but not finding any solution. I am using IIS for reverse proxy to internal puma server. Please help, as this is exposing my internal server for phishing attacks.

My installation information is:

```
Environment:
Redmine version                5.0.5.stable
Ruby version                   3.1.4-p223 (2023-03-30) [x64-mingw-ucrt]
Rails version           6.1.7.2
Environment             production
Database adapter        Mysql2
Mailer queue                   ActiveJob::QueueAdapters::AsyncAdapter
Mailer delivery         smtp
Redmine settings:
Redmine theme                  Purplemine2-master (includes JavaScript)
SCM:
Git             2.38.0
Filesystem
Redmine plugins:
additional_tags         1.0.8
additionals             3.0.9-main
redmine_kanban          1.2.0
redmine_resources       1.0.8
```

- Status changed from New to Closed

You have to configure your public hostname at **Administration** -> **Settings** -> **general** -> **Host name**. The value entered there is used to generate full URLs in some redirects and emails.
