Description

Hi

Scenario:

1. add new custom field of type "boolean"
2. select default value "False"
3. select display mode "drop down"

When you creating a new issue, newly created custom field correctly is False.
But when you editing issues that was created before adding custom field, the custom field shown as True.

Env:
Redmine 4.2.10
Ruby 2.7

History

Presumably, to reproduce this issue, you need to set Required to true in the custom field settings.
When editing an existing issue with custom field Required set to true, the custom field value is empty but the dropdown only has a Yes or No option, so Yes seems to be preferred.
