

Redmine - Defect #39131

Problem when edit a issue and change the project

2023-09-29 18:12 - Enzo Pellecchia

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	5.0.4
Resolution:			
Description			
<p>Hi, I have a strage problem:</p> <ul style="list-style-type: none">- I have roles for projects and the projects are public.- I have set up a tracker that can be created the issue in other projects using the permissions of the non-member role. <p>If the issue is created from the request's project to another project, there are no problems and everything works correctly.</p> <p>The problem arises if I have a ticket from another type of tracker and I try to modify the tracker and subsequently assign it to another project.</p> <p>I get the effect that the tracker is edited correctly, while when I select another project, the software makes an ajax call to edit.js and restores the current project.</p> <p>In practice it is impossible for me to change the project because it always restores the original one of the ticket I am modifying.</p> <p>If you need I can show you the effect live.</p> <p>It would be very useful if you could provide me with a patch while waiting for a definitive resolution.</p> <p>Thank you very much and good job</p>

Hi,
Do you use an additional plugin that allows issues to be processed dynamically?

It's best to post the complete system configuration Administrator->Info
