Description	
<p>A way of customizing the issues table would be very handy. It should allow:</p> <ul style="list-style-type: none">- adding/removing columns- reordering- include both standard and custom fields <p>I've noticed that the custom fields already get exported to CSV, so you're probably getting there...</p> <p>Thanks</p>

do you have any plans of accepting some form of donation

;)?

Feel free to contact me :-)

Thanks for the feedback and for the hard work. I'll try to test it ASAP and maybe we'll end up using Redmine for some projects here at my employer after all.

That said, do you have any plans of accepting some form of donation ;)?

Hi again,

Point 3. is committed in r889.

Custom fields can now be displayed as columns on the issue list.

Custom fields marked as "for all projects" can be added to the default columns of the issue list (in application settings).

Project specific custom fields can be displayed on custom queries.

#4 - 2007-10-01 08:15 - Jean-Philippe Lang

As of r785, default columns for the issue list can be selected at application level in 'Admin -> Settings'.

Saved queries can still override this selection.

#5 - 2007-10-01 07:40 - Jean-Philippe Lang

Hi,

1. and 2. are now available for saved queries.
