

Redmine - Defect #40403

Subtasks of all levels are shown in the parent issue

2024-03-14 21:51 - André Polykanine

Status:	New	Start date:

Target version:		Affected version:	5.0.5
Resolution:			
Description			
<p>This thing is better shown by an example. Given we have three issues: issue 1 which is a parent issue; issue 2, subtask of issue 1; and issue 3, subtask of issue 2. In this situation, when I go to issue 1, I expect to see only issue 2 as its subtask, but I see two subtasks, issues 2 and 3. If I go to issue 2, everything is correct: I see issue 1 as parent and issue 3 as subtask. It would be nice to separate direct subtasks from subtasks of other levels.</p>
