Description	
<p>When a user watches an issue because of a group membership and the user does not have the `view_issue_watchers` permission, the user cannot see that she is watching the issue.</p> <p>Currently the button link shows:</p> <ul style="list-style-type: none">- "Watch" when the user is not watching the issue or watching via a group- "Unwatch" when the user is watching the issue <p>It would be possible to show a third state for the button/link:</p> <ul style="list-style-type: none">- "Watch" when the user is not watching the issue- "Watched by group" when the user is not watching the issue but is watching the issue via a group- "Unwatch" when the user is watching the issue <p>The button/link would toggle between first and third state when the user is not also watching the issue via a group, and between second and third state when the user is also watching via a group.</p>

It might also be considered to always show the watchers list in the issue sidebar, and only show content the current user is allowed to see.

It should then be decided if the list should for example also show the groups watching the issue the user is in. I am not sure however if the name of a group a user is in is always visible to the user, this should be considered before implementing such a feature.
